ML Readiness Before/After Comparison

Generated: 27 September 2026, 10:45 UTC

1. Assessment Details

Field	Before	After
Assessment ID	e29ea56f-5900-40e5-9174-52379e113680	4876bdda-2cf4-4914-ac26-16c19d5c0eec
Dataset ID	original-dataset-51	cleaned-dataset-51
ML task	classification	classification
Configuration	NUMPA Default (version 1)	NUMPA Default (version 1)

2. Readiness Score Comparison

Metric	Result
Comparison status	Comparable
Score type	provisional
Before score	70.00/100
After score	85.00/100
Score change	+15.00 points

Both scores are provisional. Their difference describes only the measured dimensions and is not a final readiness improvement.

3. Dimension-Level Comparison

Dimension	Before	After	Change
completeness	70.00/100	95.00/100	+25.00 points

4. Issue Summary

Metric	Recorded count
Before assessment	1
After assessment	0
Resolved issues	1
Remaining issues	0
New issues	0

5. Resolved Issues

Dimension	Severity	Original finding
completeness	medium	[medium] Missing values detected.

6. Remaining Issues

No remaining issues were recorded.

7. Newly Detected Issues

No newly detected issues were recorded.

8. Outstanding Checks and Limitations

Before assessment pending: leakage_validation

After assessment pending: leakage_validation

Issue resolution means a diagnostic was not reported in the second assessment; it does not independently prove that the underlying problem was eliminated.

Provisional scores do not represent final ML readiness.

Score changes are suppressed when assessment settings or measurement coverage are incompatible.

This report documents NUMPA's recorded assessment comparison. A change in dataset readiness does not establish that a trained machine-learning model will perform better.
