ML Readiness Assessment

Generated: 27 September 2026, 08:26 UTC

Field	Value
Assessment ID	test-assessment-46
Dataset ID	test-dataset-46
ML task	classification
Target column	purchased
Intended algorithm	random_forest
Validation strategy	stratified_split
Configuration	NUMPA Default (version 1)

1. Readiness Score

Metric	Result
Score type	Provisional
Score	76.50/100
Assessment status	provisional
Measured weight	85.0%

This assessment is provisional. Its score reflects only the dimensions evaluated so far. It must not be interpreted as a final ML readiness score.

2. Scoring Dimensions

Dimension	Score	Weight	Status
completeness	90.0/100	20.0%	ready
target_suitability	63.0/100	15.0%	needs_attention

3. Outstanding Checks

Pending: leakage_validation

4. Detected Issues

Severity	Dimension	Column	Finding
medium	target_suitability	purchased	The target classes are imbalanced.

5. Recommendations

1. Review class distribution before training.

6. Assessment Limitations

Final readiness scoring is not yet available.

Preprocessing leakage audit is incomplete.

NUMPA evaluates dataset readiness, not the accuracy or reliability of a future trained ML model.
